

Mendoza, Jerome D.

BSIT – 32E1

IT Elective 3

GET is when we ask the server, Can I see this, please?

Just reading data only, no changes, nice and easy.

POST is used to add new things, sending data inside,

Like saving a resolution, now it's stored and safe to hide.

PUT is for correcting stuff when something is not right,

Updating old information to bring it back into sight.

DELETE removes the data when it's time to let it go,

Once it's gone, it's really gone, like what the server tells you so.

A 200 means it worked fine, everything is okay.

But missing resolution ID? 404 says, No way.
